Weather station Suntracer KNX Basic 24V For recording temperature, wind speed, brightness and precipitation The Suntracer KNX basic is the basic solution for recording weather data in KNX / EIB systems. The weather station reports brightness, wind speed, temperature and precipitation. All values can be used to control limit-dependent switching outputs. The states can be linked via 8 AND logic gates and 8 OR logic gates. The weather sensors, the evaluation electronics and the bus coupler are housed in a compact housing that is attached to the building with a combined wall / mast bracket. If time functions such as B. the output of the DCF77 time or a calendar timer is required or if the exact position of the sun is to be output, we recommend the Suntracer KNX in the standard version. Functions: - Brightness: The current light intensity is measured by a sensor. B. occur at building corners. The measurement works perfectly even with hail, snow and sub-zero temperatures - Precipitation detection: Precipitation is detected by a heated sensor surface. The heating only recognizes drops and flakes as precipitation, but not fog or dew. If it stops raining or snowing, the sensor is quickly dry again and the precipitation message ends - temperature measurement: switching outputs for all measured and calculated values (limit values can be set) - 8 logic inputs in the form of communication objects - AND and OR links (4 inputs each, Output to be configured as 1 bit or 2 x 8 bit) - 109 communication objects - Configuration via the KNX / EIB software ETS (from version ETS 3 graphically optimized display of the menus) \* Suitable articulated bracket for the flexible wall, mast or beam mounting optionally available Technical data: The Suntracer KNX is available as a model for 230 V AC and for 24 V DC (20 V AC) voltage. - 230 V AC model: + operating voltage: 230 V AC + current: max. 20 mA, residual ripple 10% - 24 V DC model: + operating voltage: 24 V DC or 20 V AC + current: max. 100 mA, residual ripple 10% - Mounting type: surface-mounted - Data output: EIB / KNX +/- bus plug-in terminal - BCU type: own microcontroller - PEI type: 0 - Number of group addresses: max. 254 - Number of assignments: max. 255 - Number of communication objects: 109 - Ambient temperature: -30 ° C to + 50 ° C (operation) - Protection class: IP 44 - Dimensions: approx. 96 mm x 77 mm x 118 mm (W x H x D) - Weight: 230 V AC model: approx. 226 g, 24 V DC model: approx. 146 g - Rain sensor: - Heater: approx. 1.2 watts (230 V and 24 V) - Temperature sensor: - Measuring range: -40 ° C to + 80 ° C - Resolution: 0.1 ° C - Wind...

### YOUR ADVANTAGES

**WORLDWIDE TRADE**  
Corporate video eibmarkt®

**99% CUSTOMER SATISFACTION**  
> 500,000 customers worldwide

**DHL TRACK & TRACE**  
Shipment tracking

**COMPLAINTS HANDLING**  
Obliging and 100% safely

**25 YEARS OF EXPERIENCE**  
In worldwide mail order

**ORDER LIVE CHAT**  
With order history

**SHORT DELIVERY TIME**  
Warehousing

**REFUND**  
Within 14 days

**DATA PROTECTION**  
Guarantee

\* Note on delivery time: Day = Monday to Friday, no public holiday in Bavaria or Saxony. Goods are also delivered on Saturdays (DHL).

\*\* Payment methods may vary from country to country. All prices plus shipping and excluding customs duties or other additional costs (import sales tax) for deliveries outside the EU.

\*\*\* Savings compared to RRP = the manufacturer's recommended retail price. RRP is the price recommended to retailers by the manufacturer, importer or wholesaler at a resale price to the customer. The RRP is also referred to as the list price and is defined as the highest possible price that a buyer would pay for a specific product before any discounts (Source of gross list prices: Germany).
