Analogue value transmitter KMA-F8 110730 The analogue value transmitter is used for the manual setting of manipulated variables, e.g. B. for mixing flaps, valve positions, temperature values, etc. The module can be controlled by two operating modes, which are set using the three-stage switch (ON, OFF, AUTO) on the front. The switch position is reported back via the external control contact terminals B1 and B2. Switch position ON: The manipulated variable can be set with the potentiometer on the front. The 0 to 10 V output signal is available at terminal Y. Switch position AUTO: The manipulated variable is switched through to the manipulated variable output Y without change via the YR terminal. Connection with spring-loaded terminals (push-in), setpoint adjuster, manual control level with feedback, LED brightness proportional to the manipulated variable
